Introduction

How can forces and Police and Crime Commissioners (PCCs) make the right decisions about improving value for money? While a private sector organisation can point to the 'bottom line' as the rationale for their choices, there is no agreed equation which derives value for money for policing. However, forces do have one key advantage over the private sector: access to detailed information from other similar organisations.

By exploiting the benefits of similarity, forces can reduce complexity. How? By comparing their own costs and performance with those of organisations facing similar conditions. HMIC's value for money profiles are designed for that purpose. They enable local managers and PCCs to ask the right questions, and expose areas where costs are high or performance could be improved. This also makes them integral to HMIC's approach to risk-based inspections.

The profiles are best used as part of a comprehensive performance review system. Many forces are already doing this, using the data contained in the profiles to decide where their attention should best be focused. Those forces have found that challenging costs and performance is never straight forward. There are always a range of plausible reasons that need to be assessed. A sceptical attitude is best. Never let a good story get in the way of the facts!

With these uses in mind, the profiles are designed to be:

- Relevant using the most useful, nationally available information
- Accurate as data is subject to a systematic quality assurance process (described below)
- Timely produced in October each year, when key budget decisions are taken.
- Easy to use information presented in a structured and logical format. Time saved by viewing several related charts and tables per page (or screen). Profiles can be used as a booklet and present extremely well on IPads or other tablet devices.
- Focused key differences identified, showing the impact of the difference between force and average. In addition, chevrons highlight the largest differences.
- Unbiased the facts, without the application of arbitrary weightings
- Balanced compares relative performance with relative expenditure

Use them as a reference document.

How to use the profiles

The purpose of the profiles is to help you compare your force with others. Most of the data is presented as bar charts so you can see the range of forces and where your force sits. A horizontal line runs across each bar chart and represents the simple average.

Your force is highlighted in black, but you will also notice some other forces highlighted in a darker blue. This group of forces are considered to be most similar to your force, sharing similar demographic characteristics. For this reason they make for a better comparison than with other forces. They are generally referred to as the MSG or the most similar group.

The bulk of forces fall into defined clusters to form a Group, but there are a few who are less closely clustered. These are the Metropolitan Police, Dyfed-Powys, Surrey and the City of London. These forces are still included within a most similar group, but their appearance as an outlier needs to be treated with more caution.

The MSG was designed to more fairly compare levels of crime between forces, rather than costs. They do not take account of the fact that some areas, such as London, have higher costs than elsewhere. However, they are still useful as a cost comparison as forces in a high crime MSG such as that for large urban forces are likely to have more resources, such as more police officers per head of population.

The profiles are presented in the form of logic trees with the data broken down progressively from left to right. By following the branches of the logic tree, you can identify the reason(s) for difference between your force and the others. For example, is this force spending more on police officers because there are more of them (officers per population) or because they are more expensive (cost per officer).

The small blue tables on most pages include key numerical data presented in the charts. Often they include a more detailed list of functions and costs. Reading from left to right, the tables include: a short description of the function (or crime type), followed by the volumes (e.g. Staff numbers / costs or numbers of crimes); the ratio for comparison such as your force's cost per head of population and the average costs per head of population (either the "all" England and Wales average or the "Group" MSG average).

To the right of the main table, we show how much more or less it is costing your force as a result of costs being higher or lower than the average. The more detailed financial pages include a further table. This shows whether your force spends disproportionately more than the average on police officers. Taking the call centre function for example, you might question why some forces have disproportionately higher police officer costs compared with the average.

You will notice the appearance of chevrons against some cost of difference calculations. These figures are highlighted if the indicator puts the force in the top or bottom ten percent and the effect of the difference is greater than £1 per head of population.

GUIDANCE PAGE - How to read a profile POLICE OFFICERS 4. This chart shows a breakdown of 2012/13 estimates £ per head of population Police officer FTE per 1.000 the previous chart, revealing overtime These charts break down police officer costs into salary and overtime costs has little bearing on officer costs. 6. Data quality

HMIC gives every force the opportunity to check their Chartered Institute of Public Finance and Accountancy (CIPFA) financial estimates data and Home Office management data (excluding crime data which is checked by the Home Office) through a systematic quality assurance process:

- CIPFA apply arithmetic and reconciliation checks
- Each force is asked to check their statistical outliers
- Each force receives a draft profile to check again
- HMIC resolves inconsistencies identified by ourselves and forces

Each year forces identify some anomalies or inconsistencies, which HMIC try hard to resolve. HMIC strongly encourage forces to make the necessary changes, but forces are responsible for the data they have submitted. As a result some anomalies may remain.

There are a number of ways to identify them. First, where significantly higher than average costs in one function are also shown against lower than average costs in another related function. One example is extremely high HR costs compared with extremely low training costs. Second, where costs are surprisingly low or high. Lastly, some urban forces are reporting comparatively low rates of criminal damage and anti social behaviour incidents. This probably reflects differences in the ability of IT systems to capture all the data.

Validity of comparisons

Collaboration and contracting out A few forces have raised concerns about the validity of staff comparisons between forces involved in collaborations and/or contracting out and others. Forces that lead collaboration by providing services to other forces, are concerned that higher staff numbers will reflect badly in their comparisons and distort the MSG averages. Others suggest that the comparison of non staff costs, when some forces are contracting out large parts of their organisation, is less than useful.

While we are aware of these issues, we are not yet convinced of the need to remove the relevant pages. Instead we have included an additional summary expenditure page by function, opposite the summary staffing page. Comparison of the net cost or staffing numbers by function, makes it clear which forces are involved in collaboration with other forces and which with the private sector. The non staff costs page is also retained because it so clearly identifies forces – currently Lincolnshire and Cleveland – who have undertaken large scale initiatives.

To help further with comparisons, an appendix includes a list of forces that have contracted out some or most of their custody function as well as those involved in Private Finance Initiatives (PFI). This provides some context, especially when comparing premises costs where a PFI scheme is involved.

Earned income vs. government grant Another concern, identified by North Wales Police, concerns the recording of Criminal Record Bureau (CRB) funding. Most forces have coded CRB funding as earned income while others have coded it as a grant. The POA guidance clearly states that CRB income be coded to grants. The relevant forces have been contacted and asked to submit corrections which are included.

Use of budgeted and actual staff numbers The profiles include staff numbers drawn from two data sets: the Home Office annual data return (ADR 502) which is a snapshot on 31st March of full time equivalent staff in post and the police objective analysis which counts the average, budgeted, full time equivalent staff.

In general the profiles use police objective analysis (POA) budgeted staff numbers to make detailed financial comparisons between forces. POA is a relatively recent invention and prior to 2011-12, had not been checked by HMIC. Consequently, it cannot provide a time series long enough to show changing trends. For this purpose the ADR is used because it can display data, which has been checked, over several years. ADR staff numbers are mostly used to present overall staff trends: police officers, PCSOs or police staff. Occasionally they are used to compare measures of police activity between forces.

Although the profiles show the budgeted POA and ADR 502 ftes side by side, there is no expectation that they be the same for two main reasons. First, the POA staff numbers are an average over the following financial year (2012-13), while the ADR is a snapshot at the end of the previous year (March 31st 2012). Second, the POA counts budgeted staff and will therefore include vacant posts, while the ADR counts the actual staff in post. You may notice a large difference between the two data for police staff numbers. This may be due to reductions in staff numbers between the end of one financial year and the start of the next.

Restorative justice For a force to submit a count of Restorative justice (RJ) to the Home Office, the only requirement is for the force to have a local policy in place. As there is no definition that would allow comparison, RJs are unlikely to be a National Statistic and are not included in the profiles.

New data sets

Emergency and priority incidents per population The data shows how the demands on your force for the two highest priority calls differ from your most similar forces and others. Total emergency and priority incidents are broken down into those related to crime, anti social behaviour (ASB) and other incidents. This data is drawn from force command and control systems and therefore will not include all recorded crimes or incidents.

A striking feature of other EP incidents is that the average exceeds that for the averages of crime and ASB. Further research by HMIC at six forces in has revealed that a handful of categories included in 'other incidents' account for around 50 percent of the total. These invariably include: concerns for welfare (which can include individuals with mental health problems and other vulnerable people, such as the elderly or children), domestic incidents, suspicious circumstances, traffic collisions and ASB classified as nuisance.

¹ Lower priorities, scheduled calls, have not been used as these data were found to be unreliable. The main reason is that scheduled calls are not always recorded on command and control systems; often they are recorded on separate systems for appointments.

ⁱⁱ The emergency and priority (EP) incident classifications are based on ACPO/NPIA definitions to make the data more comparable (see "National Contact Management Principles and Guidance", ACPO and NPIA, London, 2010). Emergency incidents are defined as aiming to get to victim within 15mins or 20 mins in rural locations. Priority incidents are generally those with an estimated time of arrival of within 60 mins. Some forces do not distinguish between these categories, so they are combined in the charts.

As this data is new we have encountered some minor problems, which we would like to draw to your attention. While some further local checking may required, we feel the information remains useful for comparative purposes – especially where there are large differences. You may like to check two aspects. First, the incident data includes a small proportion of calls classified as 'admin' incidents, for instance when officers use the command and control system as a means of making sure that an urgent task is carried out by others. Admin incidents represent a small proportion, often less than 5 percent. Second, we know of some forces which provided incidents with duplicate incidents included. The percentages are again small, these forces are as follows: Avon and Somerset, Dyfed Powys, Metropolitan Police, Norfolk, North Yorkshire and South Yorkshire.

Lower priority, scheduled calls have not been used as these data were found to be unreliable. The main reason is that scheduled calls are not always recorded on command and control systems, often they are recorded on separate systems for appointments.

Ribbon charts showing longer term trends, 2001-02 to 2011-12, for some crimes by force. Four types of crime rates are shown because of their distinctive patterns: violence with injury, vehicle theft (including interference), burglaries (all) and criminal damage.

The purpose of these charts is to examine the trends for your force compared with similar forces set against the rest. If your recent trends differ from the similar forces, and the general pattern, then you should review the likely causes and locations.

A few observations on the main four charts. A general feature is the reduction in the range of crime rates between forces over the period. This suggests that forces are becoming more similar in some respects, although part of this convergence is likely due to changes in recording. For example, the violence with injury chart shows large variations in crime recording, certainly until 2005-06 when the National Crime Recording Standards (NCRS) were being implemented. (2008-09 is the baseline year used in the profiles). It also shows that the introduction of NCRS had little impact on one force.

No crime rates – we show four year trends and a comparison with the all force average. The highest no crime rate is for rape.

Council tax yield – this chart shows the variation in the yield per head for your force compared with others for £1 change in Council tax.

Common gueries

The three most common queries received last year are worth repeating. The first was about the rule applied to highlight particular differences. The difference is highlighted if the indicator puts the force in the top or bottom 10 percent and the effect of the difference is greater than £1 per head of population. The other query was about the population base. The profiles adopt the mid year 2010 population estimate to align with Home Office publications especially crime rates. Rather than basing the workforce mix calculations on police officer percentages of the workforce we have used police officer costs as a percentage of gross costs for two reasons. First, it takes better account of comparisons where some forces have contracted out services, such as custody. Second, the costs of police officers vary between forces.

A final word...

Almost without exception forces have made changes to their data. Like last year, several have also raised detailed points and we would especially like to thank those who have taken the trouble to give us feedback. We count within this group two regular contributors: Thames Valley Police and Lancashire, but this year add North Wales, South Wales, Northamptonshire and Northumbria Police as each made important points.

I am always keen to hear from users how the profiles can be improved. If you have any suggestions, or any analysis which you think might be useful to include please contact me: lawrenceroy.morris33@hmic.gsi.gov.uk or 0203 513 0517.

Section One - Workforce and Costs

INTRODUCTION

This section looks at both how a force deploys its workforce and the associated costs of each of the 12 headline categories within the Police Objective Analysis (POA). POA subcategory information on costs is also presented.

POA 2012/13 estimates are used for all cost and workforce data unless stated otherwise. These data are taken as a snapshot as at 9th October. Any updates to the data which are made after this time will not be reflected in the profile.

Workforce data comprises full-time equivalent (FTE) figures. In POA estimates these are calculated as the number of staff budgeted for each staff type. Within support services, staff levels are less likely to be affected by local demographics and are therefore additionally presented as cost of function as a percentage of total cost.

Local policing workforce by function

The POA data is initially divided into twelve groups:

Local policing

Dealing with the public

Roads policing

Specialist operations

Intelligence

Investigations

Investigative support

Criminal justice

Support functions

Police authority

Central costs

National policing

Throughout the profiles the chart scales differ and the differences shown may not be as significant as they first appear.

Key to the data and calculations

<u>Net revenue expenditure</u>: The profiles use a different calculation for net revenue expenditure to Chartered Institute of Public Finance and Accountancy (CIPFA); it is calculated as total expenditure minus earned income to show the total cost of policing to the taxpayer.

Earned income: Where earned income is referred to, this covers partnership income, sales fees charges and rents, special police services, reimbursed income and interest.

Averages: All averages in this section (unless otherwise stated) are simple, unweighted England and Wales averages, which include the force in question. As the Metropolitan Police and City of London Police data distorts the chart scales, they have been excluded from all force profiles except for their own

<u>Difference to most similar group (MSG) / All force</u>: Differences are calculated on standardised data, as opposed to absolute values. Calculation is as follows: (Force cost per head - MSG cost per head) * population.

<u>Police officer as % of gross expenditure:</u> We have chosen to show the proportion of spend on officer (and overtime) by function. Calculation is as follows: (Police officer spend + Police officer overtime) / Gross Revenue Expenditure (GRE).

Personel ADR datasets: ADR datasets (other than crime) have been refreshed and run from live data, during week commencing 24th September.

How to use this section

Users may wish to focus on those charts where the force is an outlier, i.e. where they are significantly different from the average, or where they are particularly high or low. Outliers are highlighted with red chevrons and fall within the top or bottom 10% of forces; where applicable with a financial value of more than £1 per head. They should explore the reasons for any differences by looking at the force as a whole, using relevant local knowledge. Staffing levels should also be considered in the context of workforce modernisation, collaboration efforts and the outsourcing of services.

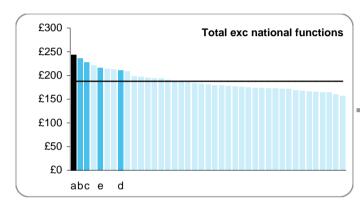

EXPENDITURE

2012/13 estimates £ per head of population

These charts give an overview of what policing in each force costs per head of population.

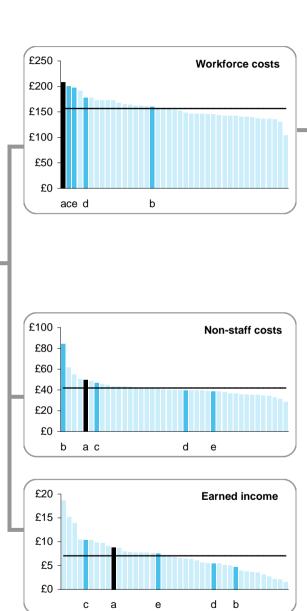

NB: the profiles calculate net revenue expenditure as total expenditure minus earned income to show the total cost of policing to the taxpayer.

NB: This is different from net revenue expenditure (NRE) as reported in POA data.

NON-STAFF COSTS AS PERCENTAGE OF WORKFORCE COSTS

2012/13 estimates

These charts provide information about non-staff costs broken down into specific types of running costs.

Non-staff costs are shown as a percentage of staff costs, as non-staff costs are largely dependent on the number of staff working for an organisation.

Third party payments include mutual aid from other police authorities, contributions to inter-authority services, transfer payments and national levies.

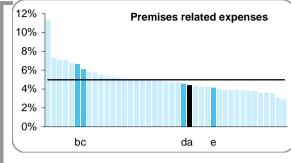

| Staff costs | £282m |

FINANCING OF EXPENDITURE

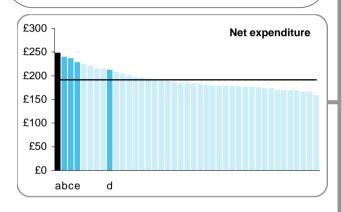

2012/13 estimates £ per head of population

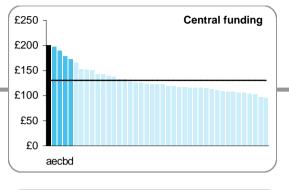

These charts show how the force funds its expenditure broken down into more detail using POA finance data.

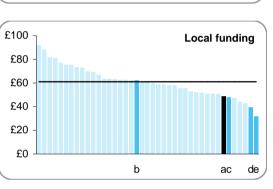

Central funding is broken down into formula based funding, and government grants, which are not formula based.

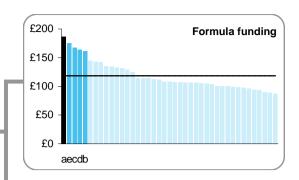

Local funding is comprised of council tax and use of reserves.

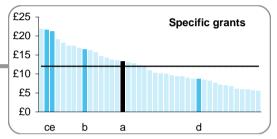

Note: forces in Wales did not receive an increase in government grant for agreeing to freeze or reduce council tax but did receive a four year grant from the Welsh Government for an additional 500 PCSO's across Wales.

Average

WORKFORCE - SUMMARY March 2012

These charts show the overall police workforce per 1,000 population which are then broken down into police officers, police staff and PCSOs.

We have subdivided officers into community police officers (CPO - those within neighbourhood response, traffic roles and probationers) and others, and therefore used ADR 502 and 601 as the data source.

Specials numbers are headcount as opposed to FTE.

POLICE OFFICERS/PCSOs BY RANK March 2012 % of FTE

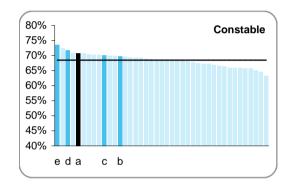

These charts show the percentage of the total officer and PCSO workforce by rank. The chart for superintendents includes chief superintendents, and the chart for inspectors includes chief inspectors. Association of Chief Police Officers (ACPO) are officers above the rank of chief superintendents.

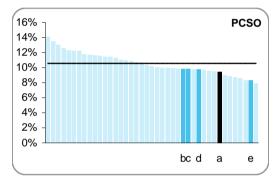

Two further charts show numbers of constables (and PCSOs) per sergeant giving an indication of the supervision requirement for each sergeant.

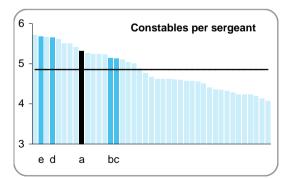

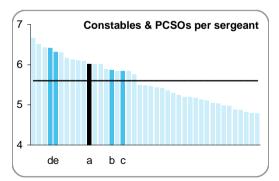

| | FTE | % | Avg |
|----------------------|-------|--------|--------|
| ACPO | 5 | 0.1% | 0.2% |
| Chief superintendent | 14 | 0.3% | 0.3% |
| Superintendent | 28 | 0.6% | 0.6% |
| Chief inspector | 46 | 1.0% | 1.2% |
| Inspector | 199 | 4.4% | 4.5% |
| Sergeant | 600 | 13.3% | 14.2% |
| Constable | 3,191 | 70.8% | 68.5% |
| PCSO | 426 | 9.4% | 10.5% |
| Force total | 4,509 | 100.0% | 100.0% |

| Constables per sergeant | 5.3 | 4.9 |

WORKFORCE & CRIME TRENDS

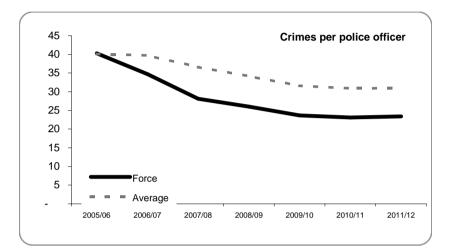

These charts compare trends of all officers and total crime excluding fraud and forgery. Charges data also exclude fraud and forgery.

We have opted to show totals in order to maintain both consistency and better data quality over time.

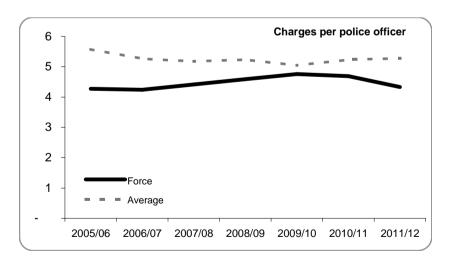

Note: PCSO are not shown.

These charts should be used to highlight relative changes rather than absolutes values.

COMMUNITY POLICE OFFICERS AND CRIME

March 2012 workforce, 2011/12 crime

These charts show numbers of police officers allocated to community duties in relation to the amount of crime in the force. While police officers are not just dealing with crime, the numbers of crimes per police officer allocated to CPO (Community police officers - see Workforce Summary) gives some indication of how busy these officers are compared to their peer group of forces.

Detail on crime can be found in section two.

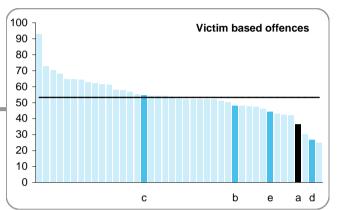

| Community police officers | 2,108 |

LEAVERS

2011-12

These charts show the percentage of the workforce that left the force between 31st March 2011 and 2012; using 31st March 2011 as the baseline.

Officers are broken down into those who transferred or left the service. Because of the current financial climate, we have costed the salary impact of staff leaving the service. However, PCSOs leaving forces may return as police officers.

NB: The leavers figures are FTE.

SICKNESS & RECUPERATIVE RESTRICTED

March 2012

These charts show sickness absence broken down into short and medium term (28 days and less) and long term (more than 28 days).

Officers on restricted duties (i.e. officers who, because of a disability or other limiting factor, are unable to undertake the full range of operational duties) and recuperative duties (officers returning to work in a phased way after injury or illness) are included separately.

NB: The gaps towards the left of some charts indicate that data is not available or has not been included; absence above 12% of the workforce and zero absence have been excluded.

WORKFORCE MIX

The table below uses POA data to look at differences in the proportion of workforce that are police staff and PCSOs, compared to the proportion that are officers. For each POA category the percentage of workforce who are staff and PCSOs in your force are compared to levels in other forces.

This comparison is done twice:

- 1) Comparing your force to the median percentage (i.e. 'middle' ratio of staff to officers where 21 forces report a high %staff and or PCSO and 21 forces report a lower %).
- 2) Comparing your force to the upper quartile (the percentage above which only a quarter of forces report higher staff and or PCSO).

Each time, the number of posts this change represents to your force is calculated, along with the cost of this difference (based on the number of posts and the difference between the median cost per office and median cost per police staff/PCSO). These average costs include overtime but exclude agency staff and are calculated separately for each of the chosen POA categories.

Please note, the cost of difference is indicative and not a 'saving' opportunity as it is unlikely that the full differences could be realised in any given case.

The analysis focuses on thirteen POA categories where our analysis found significant costs of difference between forces.

The analysis does not include specials or look at the 'Local Policing' POA category (where most specials are counted and where a different analytical approach would be required).

Note: If total staff numbers per population in a particular category are less than a quarter of the national median for that category then the relevant rows in the table are left blank. This is because such low numbers either indicate a problem with the data or that the relevant function may be contracted out (and hence the calculations are not applicable).

Section Two - Offences & Outcomes

INTRODUCTION

This section focuses on criminal offences dealt with by each force and resulting outcomes. Crime and sanction detections are presented in the format developed by HMIC in consultation with stakeholders as displayed below.

The intention is to differentiate between crimes that are victim based, and those that are driven by police activity.

Data is shown as offences per 1,000 population.

Definitions of offences in each category can be found in Appendix 1.

Note that fraud and forgery are generally excluded from all crime as we recognise that the recording in this area is not as robust as other crime categories.

A sanction detection means that a recorded crime has been resolved by the police. The types of outcomes are:

- > Caution police have identified a suspect and issued them with a caution
- > Penalty notice for disorder a fine issued by the police for anti-social behaviour, as well as shoplifting, criminal damage and possession of cannabis
- > Charge summons the suspect has been charged and/or brought to court
- > Taken into consideration (TIC) courts take this offence into consideration when sentencing for other crimes
- > Cannabis warning

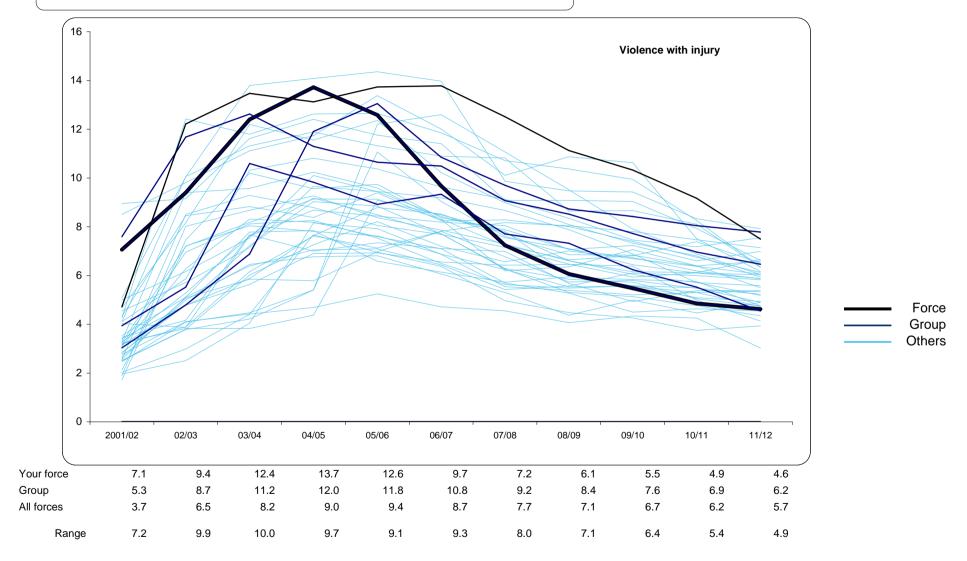

We acknowledge that 24 forces are returning data on community resolutions / restorative justice, and that these will affect sanction detection rates. These forces are listed in Appendix 3.

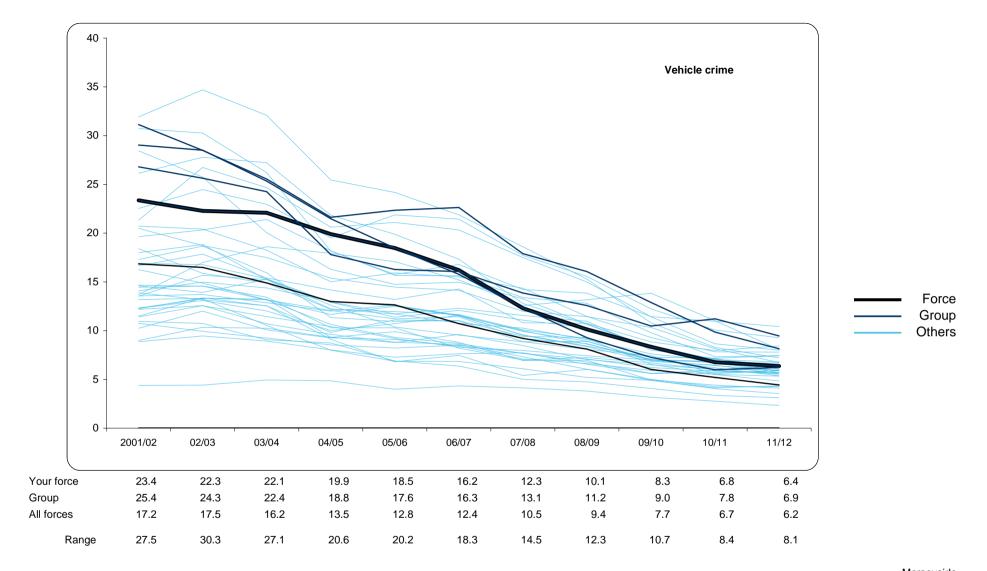

Expected sanction detection volumes are calculated by modelling what force detections would be should the force align to the peer average.

MSG averages are generally used in this section. The averages quoted are simple unweighted averages and not weighted national averages.

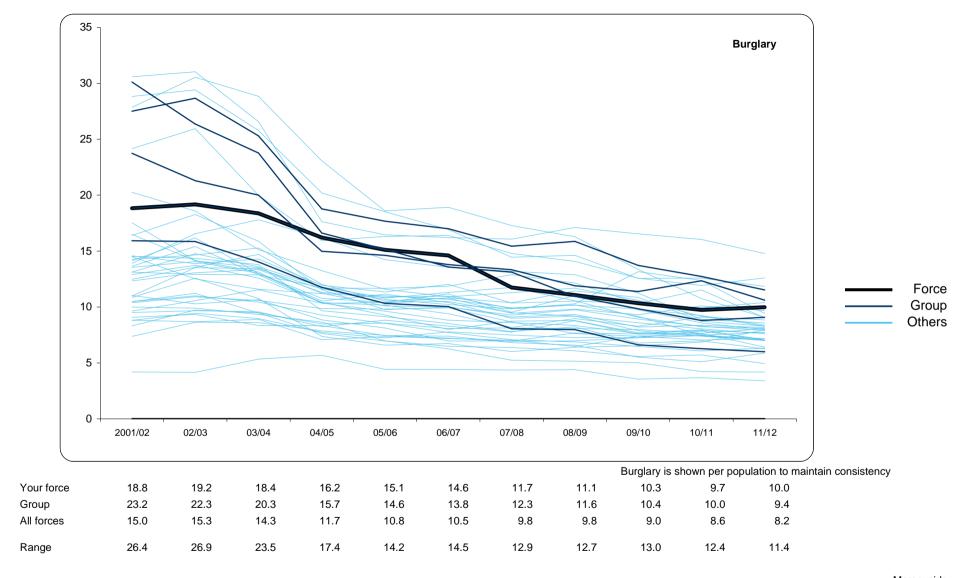

Changes over time for crimes and sanction detections are measured against the baseline of 2008/09 due to the introduction of public order offences.

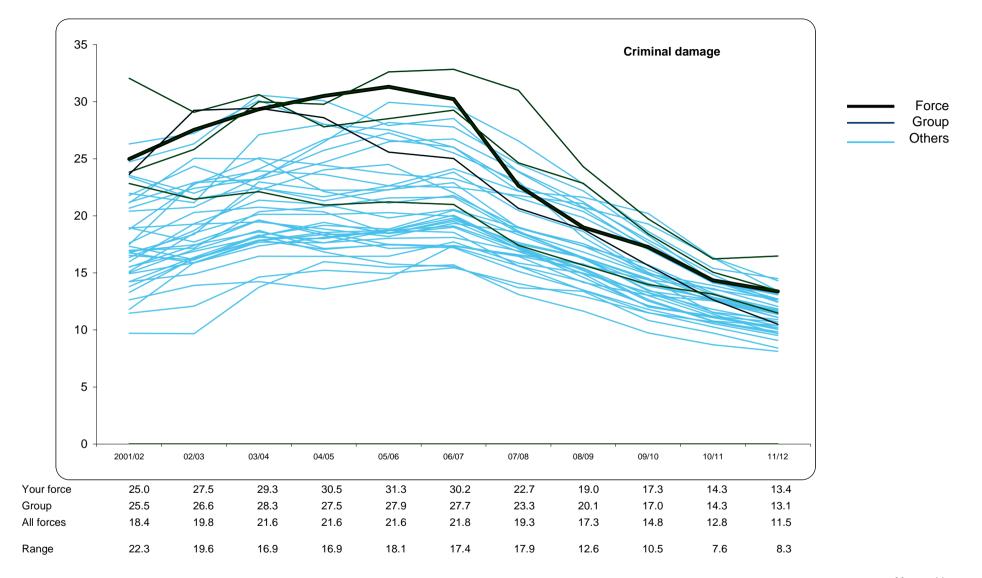

The first three charts show interesting longer term trends across all forces, notably a reduction in variance between the start and end of the period.

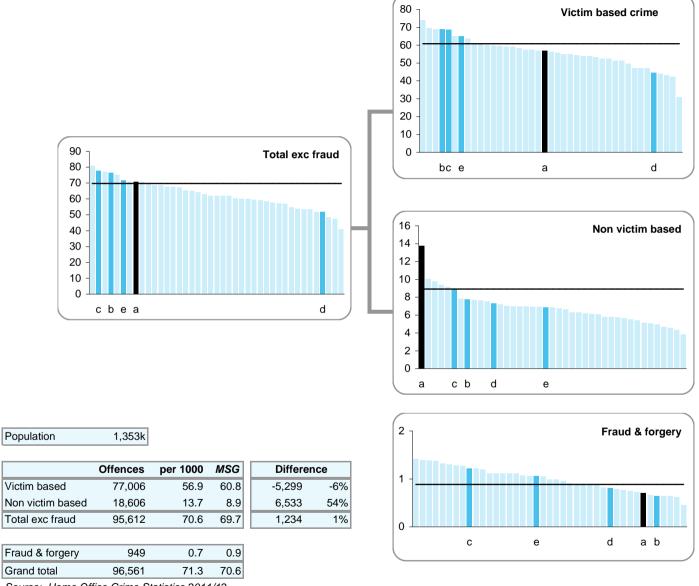

Note range = max - min rate

RECORDED OFFENCES - ALL CRIMES 2011/12 per 1,000 population

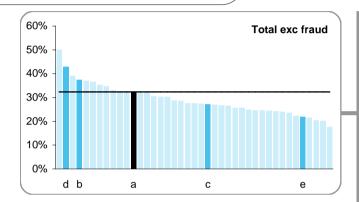

Source: Home Office Crime Statistics 2011/12

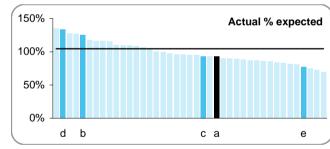

SANCTION DETECTIONS - ALL CRIMES

The actual % expected figures shows your detection rate as a percentage of the **national** average detection rate. Hence if above 100%, you are achieving more sanction detections than the national average.

As at March 2012, 23 forces submitted data on community resolutions / restorative justice - this will negatively affect sanction detection rates.

Forces reporting these data are listed in Appendix 3.

CHARGES

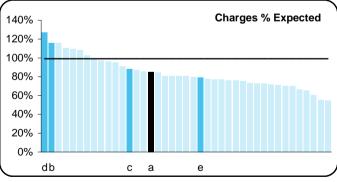

2011/12

These charts and tables show the overall charge rates and compare them with the expected charge rates. The expected charge rates show what the force would have achieved if they had matched the average for each crime type. The term charges relates to crime offences cleared up by means of charge or summons.

| | | | | | Diff from |
|------------------------------|----------|---------|-----|-----|-----------|
| | Offences | Charges | % | MSG | expected |

The level of expected charges is based on MSG average charge rates, whereas expected sanction detections shown on p61 are based on average rates for all forces

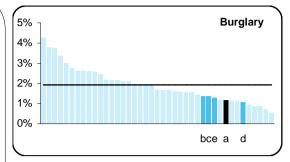

NO CRIME

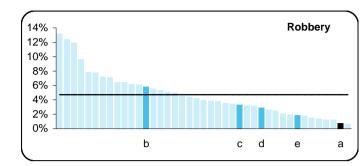

These charts show the 'no crime rate' (number of 'no crimes' divided by total recorded crime).

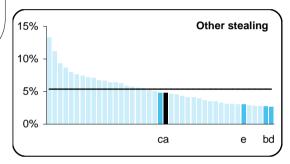

This information gives a more rounded picture of a forces crime recording practises.

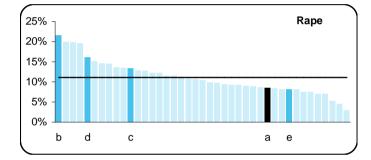

A crime could be no crimed where it is considered to have been recorded in error or where, having been recorded, additional verifiable information becomes available that determines that no crime was committed.

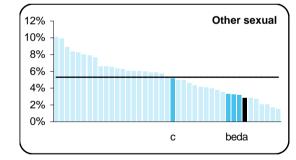

Outliers in the table below are highlighted for those in the top and bottom 10% nationally.

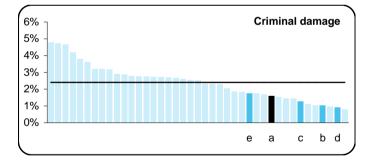

| | 2008/09 | 2009/10 | 2010/11 | 2011/12 | Average |
|-----------------|---------|---------|---------|---------|---------|
| Burglary | 1.3% | 1.4% | 1.0% | 1.2% | 1.9% |
| Robbery | 1.2% | 1.5% | 1.3% | 0.8% | 4.7% |
| Other stealing | 7.3% | 7.8% | 6.1% | 4.8% | 5.4% |
| Rape | 9.7% | 3.7% | 14.7% | 8.5% | 11.1% |
| Other sexual | 6.9% | 1.9% | 4.2% | 2.8% | 5.3% |
| Criminal damage | 1.6% | 1.7% | 1.6% | 1.6% | 2.4% |

Source: Home Office Crime Statistics 2011/12

Please note:

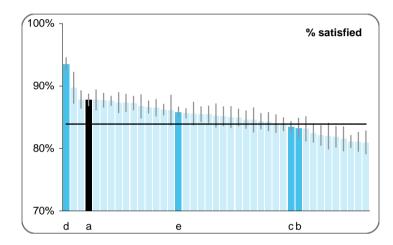

The proportion of 'no crimes' does not in itself infer high or low compliance with the overall requirements of the HOCR. Levels of 'no criming' are particularly susceptible to local recording practice and the IT systems in use. A police force having a high level of 'no crimes' may be indicative of that force having a local recording process that captures all reports as crimes at the first point of contact and before any further investigation has taken place to consider the full facts.

OVERALL SATISFACTION

2011/12 percentage satisfied

These charts show user satisfaction for the 'whole experience' (excluding road traffic collisions).

95% confidence intervals are also shown.

| | | Avg |
|---------------------|-------|-------|
| Satisfaction | 87.8% | 83.9% |
| Confidence interval | 0.9% | 0.2% |

| and 9 foreserve | | | | |

3. Fraud & forgery

- Fraud by company directorFalse accounting
- 53C Fraud by false representation: cheque, plastic card and online bank accounts (not PSP)
- 53D Fraud by false representation: other frauds
- 53E Fraud by failing to disclose information
- 53F Fraud by abuse of position
- Forgery or use of false drug prescription
- 61 Other forgery
- 53A Cheque and credit card fraud (pre Fraud Act 2006)
- 53G Obtaining services dishonestly (to be discontinued)

Appendix 2 – POA Categories

POA data are split into 12 categories, which sub-divide into headings as follows:

- 1) Local policing
 - a. Neighbourhood policing
 - b. Incident (response) management
 - c. Local investigation
 - d. Specialist community liaison
 - e. Local command team and support overheads
- 2) Dealing with the public
 - a. Local call centres / front desk
 - b. Central communications unit
 - c. Contact management units
 - d. Dealing with the public command team and support overheads
- 3) Criminal justice arrangements
 - a. Custody / prisoner handling
 - b. Criminal justice
 - c. Police national computer
 - d. Criminal record bureau
 - e. Coroner assistance
 - f. Fixed penalty schemes (central ticket office)
 - g. Property officer / stores
 - h. Criminal justice arrangements command team and support overheads
- 4) Road policing
 - a. Traffic units
 - b. Traffic wardens / police community support officers traffic
 - c. Vehicle recovery
 - d. Casualty reduction partnership
 - e. Road policing command team and support overheads

5) Specialist operations

- a. Central operations command team and support overheads
- b. Air operations
- c. Mounted police
- d. Specialist terrain
- e. Dogs section
- f. Level 1 advanced public order
- g. Airport & ports policing unit
- h. Firearms unit
- i. Civil contingencies and planning

6) Intelligence

- a. Central intelligence command team and support overheads
- b. Intelligence analysis / threat assessments
- c. Intelligence gathering

7) Specialist investigations

- a. Crime support command team and support overheads
- b. Major investigation unit
- c. Economic crime (including regional asset recovery team)
- d. Specialist investigation units
- e. Serious & organised crime unit
- f. Public protection

8) Investigative support

- a. Scenes of crime officers
- b. External forensic costs
- c. Fingerprint / dna bureau
- d. Photographic image recovery
- e. Other forensic services
- f. Investigative support command team and support overheads

9) National policing

- a. Secondments (out of force)
- b. Counter terrorism / special branch
- c. ACPO projects / initiatives
- d. Hosting national services
- e. Other national policing requirements

10) Support functions

- a. Human resources
- b. Finance
- c. Legal
- d. Fleet services
- e. Estates / central building costs
- f. Information communication technology
- g. Professional standards
- h. Press and media
- i. Performance review / corporate development
- i. Procurement
- k. Training
- I. Administration support
- m. Force command
- n. Support to associations and trade unions
- o. Freedom of information
- p. Social club support and force band
- q. Insurance / risk management
- r. Catering

11) Police authority

- a. Democratic representation
- b. Police authority support
- c. Other costs
- d. Yreasury management
- e. Internal audit

12) Central costs

- a. Revenue contribution to capital
- b. Capital financing
- c. Pensions and exit costs
